

# LexisGuide

## Lighthouse for government documents

AI-powered clarity checks, procedural fairness analysis, and verifiable review trails for notices, denials, public forms, administrative letters, and shared agreements.

### IMPORTANT · HUMAN DECISION

#### LexisGuide is decision support - not legal advice.

LexisGuide is not a law firm and does not replace legal counsel. AI findings are informational and non-binding. Users decide whether to accept, reject, edit, sign, or act on any suggestion and remain responsible for their decisions and documents.

Hackathon concept · US-oriented prototype · Human-in-the-loop decision support

**From confusing notice → clear next step → verifiable review history**

### What LexisGuide does

- 01 Reads the notice
- 02 Checks due process
- 03 Explains what is missing
- 04 Tracks every review step

Clearer  
government,  
stronger people

# DueProcess Linter

Lighthouse for government letters, PDF notices, and public forms

AI checks whether a document is understandable to the public and meets basic standards of procedural fairness.

More clarity  
in public  
communication

## Who it's for

Helping different stakeholders speak the same language.

### Resident / Citizen

Wants to understand what is required, the deadline, and how to appeal.

Finally, I know what to do.

### Lawyer / Legal Aid

Quickly spots weak points in notices, denials, and administrative letters.

More time to help people.

### Agency / Public Service

Checks the quality of letters and forms before sending them to the public.

Clearer documents, fewer complaints.

Understandable  
processes make  
a stronger society

### Notice of Denial

Dear Applicant,

Your request for benefits under the Supplemental Nutrition Assistance Program (SNAP) has been denied in accordance with 7 C.F.R. § 273.2.

You may appeal this decision by filing a written request for a fair hearing.

Sincerely,

Program Administrator  
April 15, 2024

A more  
understandable  
government  
for everyone

### Analysis results

Extracted data

Text & suggestions

Share

Procedural Clarity:

54/100

Clarity

43

Fairness

65

Issues found 5

Appeal deadline: unclear

Where to file the appeal: missing

Date conflict detected

Consequences of inaction: not explained

Text is too complex

What's good 2

Issuing agency is identified

Contact information is included

## How it works

From document to clear guidance in minutes.

1

Upload a document  
PDF, letter, screenshot,  
or website

2

AI extracts deadlines,  
actions, and legal basis

3

The linter checks rules

Is there a deadline?

Is there an appeal right?

Is the text understandable?

Are any dates inconsistent?

4

Get a report + suggestions  
what to fix / what to do next

Complex  
documents –  
simple answers

**The idea:** check not only legality, but also whether the procedure is understandable for an ordinary person.

## Why it helps

More clarity. Fewer mistakes. More trust.

### For people

It becomes immediately clear what to do, by when, and what happens if you do nothing.

Confidence instead  
of uncertainty.

### For lawyers

Saves time during initial review of documents.

Get to the point faster.

### For agencies

Helps make letters easier to understand and reduces errors and complaints.

Clear documents build public trust.

Technology  
for a fairer  
tomorrow

# The problem

Public notices can be legally valid and still be practically unusable.

A person receives a denial or administrative notice. The document cites rules, but the deadline is vague, the appeal path is buried, and the consequences of doing nothing are unclear.

PERSON

## Resident / Citizen

Needs a plain answer: What happened? What must I do? By when? What if I do nothing?

LEGAL

## Lawyer / Legal Aid

Needs fast issue spotting, source-linked findings, and a clean first-pass review trail.

AGENCY

## Agency / Public Service

Needs to catch ambiguous deadlines, missing appeal instructions, and confusing language before publication.

# Core workflow

One upload, two outputs: a fairness audit and a practical next-step guide.

## Key product principle

LexisGuide does not ask users to trust a black-box score. Every flagged issue links back to the exact document evidence and the rule that triggered it.

# Procedural Fairness Linter

A Lighthouse-style audit for administrative communication.

# Verifiable Review Chain

Not “blockchain because hackathon.” A provenance trail that makes the analysis auditable.

## Version history becomes part of the product

# Shared Workspace for Agreements

Invite the other party, review the same document, discuss issues, revise, and preserve every version.

EXAMPLE • TENANT ↔ LANDLORD

AI SUGGESTS • PEOPLE DECIDE

# MVP architecture

Keep the demo deterministic where it matters, and use AI where it adds value.

**Good hackathon tradeoff:** LLM extracts and explains; deterministic rules produce the core PASS / FAIL findings.

# Hackathon MVP

One narrow workflow, polished end-to-end, beats a fake “all of US law” platform.

## Build now

- Upload one document workflow (notice or agreement)
- Extract parties / agency, dates, deadlines, obligations
- Run 8-12 deterministic fairness / clarity checks
- Generate a plain-English next-step summary
- Link every finding to an evidence span
- Create workspace + invite collaborator by link
- Chat, upload v2, and preserve the version chain
- Export the final PDF for print / signature

## After the hackathon

- Jurisdiction-specific rule packs
- Browser extension for public forms
- Agency authoring mode before publication
- Legal-aid case intake integration
- Policy / template analytics across an agency
- Signed review manifests / external verification
- Optional workflow connectors and case management

### DEMO SCENARIO

A benefits denial says the applicant may appeal, but gives no clear filing deadline or appeal destination. LexisGuide flags both problems, explains the next step, then shows how the revised notice improves from 54 → 81.

# Three-minute demo story

Show the pain, the fix, and the trust layer. No 47-tab enterprise cosplay.

0:00–0:25

## The problem

Open a confusing Notice of Denial. Ask: “What exactly should this person do next?”

0:25–1:05

## The lint

Upload it. LexisGuide returns 54/100 and highlights two critical procedural gaps.

1:05–1:40

## The explanation

Click a finding. Show the exact source span, triggered rule, and plain-language explanation.

1:40–2:15

## The fix

Edit the notice: add the deadline + appeal destination. Re-run and show the score jump.

2:15–2:45

## The chain

Open Review Chain: file hash, rule/model version, evidence spans, and v1 → v2 history.

2:45–3:00

## The close

“Government documents should not require a lawyer just to understand the next step.”

# LexisGuide

**Make due process understandable, reviewable, and verifiable.**

LexisGuide turns government notices and shared agreements into structured, reviewable workflows: it detects missing or ambiguous steps, explains what users need to consider, and preserves a verifiable trail of how each document was analyzed, discussed, and improved.

Procedural Fairness

Plain-Language Guidance

Evidence-linked Findings

Shared Review Workspace

## GITHUB DESCRIPTION

**Lighthouse for government documents: AI-powered clarity checks, procedural fairness analysis, and verifiable review trails.**

US-oriented hackathon prototype • Designed as decision support, not legal advice
